## WorldPharma2010

16th World Congress on Basic and Clinical Pharmacology.  
July 17-23, 2010, Copenhagen, Denmark

18

Focused Conferences  
– one World Congress

Abstract deadline 15 January 2010

Early bird registration deadline 15 March 2010

## Invitation

In July 2010 a major event is planned for pharmacology, the science of how drugs affect the living organism. Basic and clinical pharmacology, kept separate for too long, have come together again to encompass the whole process of drug development from molecular biology to clinical practice. This remarriage is to be celebrated in Copenhagen at this congress where the worlds basic and clinical pharmacologists and all those dealing with the development and use of drugs will meet to discuss how we can work together to meet the need for safe and effective medicines at affordable prices.

The Danish Society of Pharmacology and Toxicology and the Danish Society of Clinical Pharmacology jointly with the British Pharmacological Society under the auspices of the International Union of Basic and Clinical Pharmacology, IUPHAR organize WorldPharma2010.

The scientific programme will be based on focused conferences and plenary lectures, as well as poster sessions, sponsored symposia, workshops and satellite meetings. Each of the 18 focused conferences contains 4 or 5 half-day sessions all belonging to the same theme.

The titles of the focused conferences are listed on the opposite page.

2010 now is only about a year off, and we suggest you make a note in your diary that July 17-23 is going to be time spent in Denmark. We promise you a scientifically excellent programme as well as the opportunity to savour the atmosphere of Copenhagen.

Kim Brøsen  
President

Michael Mulvany  
Secretary General

## Focused Conferences during WorldPharma2010:

- Maximising benefits and minimizing harms from drugs
- The role of clinical pharmacology in the emerging countries
- Transmembrane transport: perspectives for disease and drug Discovery
- G protein-coupled 7<sup>TM</sup> receptors: from molecular to physiological function
- Pharmacoepidemiology: current controversies and opportunities
- Addiction and doping: neurobiological and clinical basis of emerging treatments
- Translational science in the metabolic syndrome: basic and clinical pharmacological aspects
- New approaches and targets in psychiatry
- Natural products and systems biology: past and future?
- Drugs for half the World: paediatric clinical pharmacology
- Endothelium in health and disease
- Developments in the treatment of sexual dysfunction and diseases of the lower urinary tract
- New nuclear receptor targets for specific treatment of disease
- Simulation and data modelling in drug development. Better drugs faster?
- Ion channels in analgesia and anaesthesia
- Ion channels: new windows on complex diseases and therapy
- Inflammation and immunopharmacology: new tools for old diseases
- The heart gone wrong; stabilization of cardiac function
